THE LOWER FUNGI OF THE PHILIPPINE ISLANDS

A bibliographic list
chronologically arranged, and with localities and hosts

by

C. F. Baker

(*College of Agriculture, Los Baños, P. I.*)

The lower fungi of the Philippines are of extraordinary interest, not only because they represent a flora largely unknown to science, and rich in new species and genera, but because they present a whole new world of host relationships, and in this connection represent the causal agents of many economically important diseases of cultivated plants, numbers of which, up to this time, have been unknown to either mycology or plant pathology.

On coming to the Islands a year ago, and of a necessity giving some attention to the fungi of the farm and gardens of the College of Agriculture, I was immediately faced with the imperative need of having for reference a bibliographic host list of the known fungi. The list completed in the first few months of my stay here was surprisingly small, including but a few hundred species. With the activities of the past year now coming into print, however, the list has grown by leaps and bounds to several times its former size.

The work, just as it stands, is published at this time, in order that corrections and additions may be made as promptly as possible, the bibliography of older species completed, and the families and genera brought into more correct arrangement. Naturally it will be impossible for the student of mycology

or plant pathology to get along without such a corrected list. We shall want to move steadily towards an illustrated manual of the Philippine fungi, and the present work is an absolutely essential preliminary.

It would have been impossible for me to bring the list even to its present state of development without the friendly suggestions and kindly assistance of a number of mycologists, among whom special mention should be made of *H. Rehm*, *H. Sydow*, *N. Patouillard*, and *P. Hariot*. I have also received constant help in the matter of host determinations and references, from *E. D. Merrill*, *E. B. Copeland*, *F. W. Foxworthy*, and *P. W. Graff*. Bureau of Science material in these groups has largely been determined by *Hennings* and *Sydow*. Of my material, and that of my students, the *Uredinales*, *Ustilaginales*, and *Imperfecti* have largely gone to *Sydow* and to *Saccardo*, while the *Ascomycetes* have mostly been sent to *Rehm*, and to these authorities the fullest acknowledgements are due.

The provinces are not cited for well known localities. Mt. Maquiling and Mt. Banahao in Laguna Province, have become classical collecting ground in Philippine botany. The many citations of Los Baños, refer to the municipality of that name, including the barrios of Los Baños, San Antonio, and the lower part of the domain of the College of Agriculture. This region, fronted by the great freshwater Laguna de Bay on the north, and backed by heavily forested Mt. Maquiling rising to 3600 feet, is one of the richest collecting grounds of similar area, known to me in all my wandering in tropical lands. I have never seen anywhere, so desirable a location for a botanical and mycological laboratory, for a botanical garden, and for work along these lines. Indeed, it is all one colossal and incomparable botanic garden, just as it stands.

The List of Philippine Fungi by *Ricker*, published in Philip. Journ. Sci. I (1906), covering all groups, comprised 32 genera, and 45 species. The present list of the lower fungi only, records 215 genera, and 638 species. It will be noted that as yet no representatives are recorded for a good many families that are certain to be well represented in the Islands. It means simply that no attention has yet been given to these families in the field.

The collecting records of the present list are due to the interest and enterprise of the following named persons, the number of collections reported following the name in each case; this will be greatly modified very soon, since large collections from the Philippines are only now being studied by European specialists: *R. Alvarez*, 1; *C. F. Baker*, 200; *W. H. Brown*, 5; *A. L. Cenabre*, 2; *E. B. Copeland*, 77; *H. Cuming*, 5; *H. M. Curran*, 7; *A. D. E. Elmer*, 100; *G. Evaristo*, 3; *E. Fenix*, 7; *F. W. Foxworthy*, 7; *F. C. Gates*, 1; *P. W. Graff*, 69; *A. Loher*, 1; *L. Mangubat*, 1; *J. Masferre*, 1; *R. C. McGregor*, 26; *E. A. Mearns*, 1; *E. D. Merrill*, 237; *D. P. Miranda*, 1; *J. J.
